

CSE 421/521 PA0: Thread Priority

The objective of this assignment is to add the ability to set thread priority in Pintos. The assignment can be broken up into the following:

- Read the Reference Guide and Introduction in the Pintos Manual available on UBLearn and get familiar with threads, building and debugging Pintos, and running tests.
- Find and edit relevant code in `~/pintos/src/threads/`
- Run `make tests/threads/pa0.result` in your build directory to test your work. PA0's test is included in the Pintos 64-bit image on UBLearn. If you are using your own Pintos build, then you can copy `pa0.c`, `pa0.ck`, `test.c`, `test.h`, and `Make.tests` into `~/pintos/src/tests/threads/`
- After passing PA0's test, answer the quiz in PA0 on UBLearn.

This is a relatively short assignment meant to ease you into Pintos and PA1 and iron out any environment problems.
